- (1) **Introduction** : As the world grapples with climate change, renewable energy has emerged as a crucial solution. This case study aims to analyze the increasing use of renewable energy in India, its adoption across different sectors, and the implications for society and the environment.
- (2) **Methodology** : A survey was conducted among households, businesses, and industries across various regions in India. Participants were asked about their primary source of energy (traditional fossil fuels or renewable energy) and the reasons for their preferences. The data was then analyzed to identify trends and patterns among different demographics and sectors.
- (3) **Survey Examination** : The survey encompassed a comprehensive examination of energy consumption habits, not only focusing on the preferred sources of energy but also delving into the underlying motivations and influences guiding these choices. Beyond mere preference, participants were encouraged to articulate the reasons behind their selections, providing invaluable insights into the multifaceted nature of energy consumption.
- (4) **Results** : The survey results revealed interesting insights into the energy preferences among different groups :
