Marking Scheme Strictly Confidential (For Internal and Restricted use only) Senior School Certificate Examination, 2025 SUBJECT NAME PHYSICS (PAPER CODE 55/1/1)

General Instructions: -

1	You are aware that evaluation is the most important process in the actual and correct
	assessment of the candidates. A small mistake in evaluation may lead to serious problems
	which may affect the future of the candidates, education system and teaching profession.
	To avoid mistakes, it is requested that before starting evaluation, you must read and
_	understand the spot evaluation guidelines carefully.
2	"Evaluation policy is a confidential policy as it is related to the confidentiality of the examinations conducted, Evaluation done and several other aspects. Its' leakage to
	public in any manner could lead to derailment of the examination system and affect
	the life and future of millions of candidates. Sharing this policy/document to
	anyone, publishing in any magazine and printing in News Paper/Website etc may
	invite action under various rules of the Board and IPC."
3	Evaluation is to be done as per instructions provided in the Marking Scheme. It should not
	be done according to one's own interpretation or any other consideration. Marking
	Scheme should be strictly adhered to and religiously followed. However, while
	evaluating, answers which are based on latest information or knowledge and/or are
	innovative, they may be assessed for their correctness otherwise and due marks be
	awarded to them. In class-X, while evaluating two competency-based questions,
	please try to understand given answer and even if reply is not from marking scheme
	but correct competency is enumerated by the candidate, due marks should be
	awarded.
4	The Marking scheme carries only suggested value points for the answers
	These are in the nature of Guidelines only and do not constitute the complete answer. The
	students can have their own expression and if the expression is correct, the due marks
_	should be awarded accordingly.
5	The Head-Examiner must go through the first five answer books evaluated by each
	evaluator on the first day, to ensure that evaluation has been carried out as per the
	instructions given in the Marking Scheme. If there is any variation, the same should be zero after delibration and discussion. The remaining answer books meant for evaluation
	shall be given only after ensuring that there is no significant variation in the marking of
	individual evaluators.
6	Evaluators will mark($$) wherever answer is correct. For wrong answer CROSS 'X" be
	marked. Evaluators will not put right (\checkmark) while evaluating which gives an impression that
	answer is correct and no marks are awarded. This is most common mistake which
	evaluators are committing.
7	If a question has parts, please award marks on the right-hand side for each part. Marks
	awarded for different parts of the question should then be totaled up and written in the left-
	hand margin and encircled. This may be followed strictly.
8	If a question does not have any parts, marks must be awarded in the left-hand margin and
	encircled. This may also be followed strictly.
9	If a student has attempted an extra question, answer of the question deserving more
	marks should be retained and the other answer scored out with a note "Extra Question".
10	No marks to be deducted for the cumulative effect of an error. It should be penalized only
	once.
11	A full scale of marks70(example 0 to 80/70/60/50/40/30 marks as given in
	Question Paper) has to be used. Please do not hesitate to award full marks if the answer

	deserves it.
12	Every examiner has to necessarily do evaluation work for full working hours i.e., 8 hours every day and evaluate 20 answer books per day in main subjects and 25 answer books per day in other subjects (Details are given in Spot Guidelines). This is in view of the reduced syllabus and number of questions in question paper.
13	 Ensure that you do not make the following common types of errors committed by the Examiner in the past:- Leaving answer or part thereof unassessed in an answer book. Giving more marks for an answer than assigned to it. Wrong totaling of marks awarded on an answer. Wrong transfer of marks from the inside pages of the answer book to the title page. Wrong question wise totaling on the title page. Wrong totaling of marks of the two columns on the title page. Wrong grand total. Marks in words and figures not tallying/not same. Wrong transfer of marks from the answer book to online award list. Answers marked as correct, but marks not awarded. (Ensure that the right tick mark is correctly and clearly indicated. It should merely be a line. Same is with the X for incorrect answer.) Half or a part of answer marked correct and the rest as wrong, but no marks awarded.
14	While evaluating the answer books if the answer is found to be totally incorrect, it should be marked as cross (X) and awarded zero (0)Marks.
15	Any un assessed portion, non-carrying over of marks to the title page, or totaling error detected by the candidate shall damage the prestige of all the personnel engaged in the evaluation work as also of the Board. Hence, in order to uphold the prestige of all concerned, it is again reiterated that the instructions be followed meticulously and judiciously.
16	The Examiners should acquaint themselves with the guidelines given in the " Guidelines for spot Evaluation " before starting the actual evaluation.
17	Every Examiner shall also ensure that all the answers are evaluated, marks carried over to the title page, correctly totaled and written in figures and words.
18	The candidates are entitled to obtain photocopy of the Answer Book on request on payment of the prescribed processing fee. All Examiners/Additional Head Examiners/Head Examiners are once again reminded that they must ensure that evaluation is carried out strictly as per value points for each answer as given in the Marking Scheme.

	MARKING SCHEME: PHYSICS(042)		
	Code: 55/1/1		
Q.No	VALUE POINTS/EXPECTED ANSWERS	Marks	Total Marks
	SECTION A		
1	(A) $q_2 < q_3 < q_1$	1	1
2	(C) $\frac{R}{8}$	1	1
3	$(B) \left(-3\hat{j}+2\hat{k}\right)\mu N$	1	1
4	(B) 0.30 C	1	1
5	(B) 2866	1	1
6	(D) $\frac{i_0 v_0}{2} \cos \phi$	1	1
7	(A) X- rays, Micro waves, UV radiation	1	1
8	(B) $\frac{3H}{4}$	1	1
9	$\begin{array}{c} (B) & 4 \\ (C) & \frac{h}{m} \end{array}$	1	1
10	(B) $\lambda_e > \lambda_p > \lambda_d$	1	1
11	(A) $\underbrace{\xrightarrow{B.E.}_{A}}_{56} \xrightarrow{56} A$	1	1
12	(C) The barrier height and the depletion layer width both decrease.	1	1
13	(A) Both Assertion (A) and Reason (R) are true and Reason (R) is the correct explanation of Assertion(A).	1	1
14	(A) Both Assertion (A) and Reason (R) are true and Reason (R) is the correct explanation of Assertion (A).	1	1
15	(C) Assertion (A) is true but Reason (R) is false.	1	1
16	(D) Assertion (A) is false and Reason (R) is also false.	1	1
	SECTION - B		
17	Calculating the value of E1Calculating the value of r1		
	E = V + Ir In first case E = 5 + 2r	1/2	
	In second case E = 4 + 4r	1/2	
	After solving		

	E=6 V	1/2	
	$r = 0.5 \Omega$	1/2	2
18	(a) Calculating the width of the slit 2		
	Condition for Minima a $\sin\theta = n\lambda$ For First Minima n=1	1	
	$a \sin 30^\circ = 600 \times 10^{-9} \mathrm{m}$	1/2	
	$a \times \frac{1}{2} = 600 \times 10^{-9} \mathrm{m}$		
	$a = 1200 \times 10^{-9} m$ = 1.2 × 10 ⁻⁶ m	1/2	
	OR		
	(b) Finding the Intensity 2		
	Phase difference = $\frac{2\pi}{\lambda}$ × path difference	1/2	
	$\Delta \phi = \frac{2\pi}{\lambda} \Delta x$		
	$\therefore \Delta x = \frac{\lambda}{8} (given)$		
	$\Delta \phi = \frac{2\pi}{\lambda} \times \frac{\lambda}{8}$		
	$\Delta \phi = rac{\pi}{4}$	1⁄2	
	$I = I_{\circ} + I_{\circ} + 2\sqrt{I_{\circ}I_{\circ}}\cos\frac{\pi}{4}$	1/2	
	$=2I_{\circ}+2I_{\circ}\times\frac{1}{\sqrt{2}}$		
	$I = 2I_{\circ} \left(1 + \frac{1}{\sqrt{2}} \right)$		
	$= I_{\circ}(2 + \sqrt{2})$ $I = 3.414 I_{\circ}$	1/2	
	Alternatively Phase difference = $\frac{2\pi}{\lambda}$ × path difference	1/2	

$\Delta \phi = \frac{2\pi}{\lambda} \Delta x$		
$\Delta \phi = \frac{2\pi}{\lambda} \Delta x$ $\therefore \Delta x = \frac{\lambda}{8} (given)$		
$\Delta \phi = \frac{2\pi}{\lambda} \times \frac{\lambda}{8}$	1/2	
$\Delta \phi = \frac{\pi}{4}$		
$I = 4I_{\circ} \cos^2\left(\frac{\phi}{2}\right)$	1/2	
$I = 4I_{\circ} \cos^{2}\left(\frac{\phi}{2}\right)$ $I = 4I_{\circ} \cos^{2}\left(\frac{\pi}{8}\right)$	1/2	2
19 Calculating angle θ 2		
η_1 η_2 θ_c η_c		
For critical Angle $n_2 = 1$	1/2	
$\frac{n_2}{n_1} = \frac{1}{\sin \theta_c}$		
$n_1=1$ $n_2=\frac{2}{\sqrt{3}}$ (given)		
$\frac{2}{\sqrt{3}} = \frac{1}{\sin \theta_c}$		
$\sin\theta_c = \frac{\sqrt{3}}{2}$		
$ heta_c = 60^\circ$		
$r = 90 - \theta_c$ $= 30^{\circ}$	1/2	
From Snell's law at air rod interface $n_1 \sin i = n_2 \sin r$	1/2	

	$n_2 = \frac{\sin\theta}{\sin r}$		
	$\frac{2}{\sqrt{3}} = \frac{\sin\theta}{\sin 30^{\circ}}$ $\frac{2}{\sqrt{3}} \times \frac{1}{2} = \sin\theta$ $\frac{1}{\sqrt{3}} = \sin\theta$		
	$\frac{2}{\sqrt{2}} \times \frac{1}{2} = \sin \theta$		
	$\sqrt{3}$ 2 1		
	$\overline{\sqrt{3}} = \sin\theta$		
	$\theta = \sin^{-1}\left(\frac{1}{\sqrt{3}}\right)$	1/2	2
20	Proving Time period of Revolution ,T α n ³ 2		
	$T = \frac{2\pi r}{1} $ (1)	1/2	
	v From Bohr's quantization condition		
	$mvr = \frac{nh}{2\pi}$		
	$v = \frac{nh}{2\pi mr} \qquad (2)$	1/2	
	2πmr From (1) and (2)		
	$T = \frac{2\pi r}{1}$		
	$\binom{nh}{2\pi mr}$		
	$T = \frac{2\pi r (2\pi m r)}{nh}$		
	$T = \frac{4\pi^2 m r^2}{1}$	1/2	
	nn		
	From $r = \frac{n^2 h^2}{4\pi^2 m k e^2}$		
	$T = \frac{4\pi^2 m}{nh} \left(\frac{n^2 h^2}{4\pi^2 m k e^2}\right)^2$		
	$T = \frac{n^3 h^3}{4\pi^2 m k^2 e^4}$		
	$ = \frac{1}{4\pi^2 m k^2 e^4} $ $ \Rightarrow T \alpha n^3 $	1/2	
	\Rightarrow 1 α n ² Alternatively	/2	

	$T=\frac{2\pi r}{2\pi r}$	1/2	
	$T = \frac{1}{v}$		
	$\therefore r \alpha n^2$	1/2	
	and $v\alpha - \frac{1}{2}$	1/2	
	n $\therefore T \alpha n^3$	1/	2
21		1/2	2
	Finding the number of holes 1		
	One example 1		
	1 dopant atom for 5×10^7 Si atoms		
	and number density of Si atoms = $5 \times 10^{28} \frac{\text{atoms}}{\text{m}^3}$ (given)		
	No. of holes created per $m^3 = \frac{5 \times 10^{28}}{5 \times 10^7} = 10^{21}$	1	
	Number of holes created per cubic centimeter		
	$=\frac{10^{21}}{10^6}=10^{15}$		
	Any one example of dopant - Aluminium / Indium / Gallium	1	
			2
22	SECTION - C		
	(a) Finding		
	(i) Equivalent emf of combination1(ii) Equivalent internal resistance of combination1		
	(iii) Current drawn from combination 1		
	(i) Because $E_{1} = \frac{E_1 r_2 + E_2 r_1}{E_1 r_2 + E_2 r_1}$	1/2	
	(i) Because $E_{eq} = \frac{E_1 r_2 + E_2 r_1}{r_1 + r_2}$		
	$E_{eq} = \frac{3 \times 0.4 + 6 \times 0.2}{0.6} = 4 \text{ V}$	1⁄2	
	(ii) $r_{eq} = \frac{r_1 r_2}{r_1 + r_2}$	1/2	
		1/2	
	$r_{eq} = \frac{0.2 \times 0.4}{0.2 + 0.4} = 0.133\Omega$		
		17	
	(iii) $I = \frac{E}{R + r_{eq}}$	1/2	
	$I = \frac{4}{4+0.13} = \frac{4}{4.13} A$	1/2	
	I = 0.9A		
	1 - 0.911		

	OR		
(b)	(i) Finding the relation(i) between R' and R(ii) between v_d' and v_d (ii) between v_d' and v_d (ii) To identify whether all free electrons are moving in the same direction.		
	l' = 2l Al = A'l' = volume of the wire Al = A'(2l)		
R	$ \begin{aligned} \frac{\partial h}{\partial t} &= A' \\ &= \frac{\rho l}{A} \\ &= \frac{\rho l'}{A'} \end{aligned} $	1⁄2	
$R' =$ $\frac{R'}{R} =$	$\frac{\rho(2l)}{A/2}$	1/2	
Alter <i>R'</i> = n= 2	matively $n^2 R$	1/2	
	$v_{\rm d} = \frac{eE}{m} \tau$	1/2	
v _d			
$\frac{\mathbf{v}_{d}'}{\mathbf{v}_{d}} =$ (ii) N	$=\frac{l}{l'}=\frac{1}{2}$	1/2 1	3
23	Derivation for Magnetic field on the axis $2\frac{1}{2}$ Magnetic field at the centre $\frac{1}{2}$		

$ \begin{array}{c} $	1/2	
From Biot Savart's Law $\begin{vmatrix} d\vec{B} \end{vmatrix} = \frac{\mu_{\circ}}{4\pi} \frac{I d\vec{l} \times \vec{r} }{r^{3}}$ Now $r^{2} = x^{2} + R^{2}$ Because $ d\vec{l} \times \vec{r} = rdl$	1/2	
$\dot{aabda} dB = rac{\mu_\circ}{4\pi} rac{idl}{(x^2+R^2)}$	1/2	
$d\vec{B} \text{ has two components.}$ All the components perpendicular to x- axis are summed over and y. Only x- components contribute. The net contribution along x- directed dB _x = dB cos θ $\cos \theta = \frac{R}{\left(R^2 + x^2\right)^{\frac{1}{2}}}$		
Thus: $dB_x = \frac{\mu_{\rm e}i}{4\pi} dl \frac{R}{\left(R^2 + x^2\right)^{\frac{3}{2}}}$		
Summing dB_x over the entire loop		
$\oint dl = 2\pi R$ $\vec{B} = B_x \hat{i} = \frac{\mu_o i R^2}{2(x^2 + R^2)^{\frac{3}{2}}} \hat{i}$	1/2	
Magnetic field at the centre of the loop- Here $x=0$ $\vec{p} = \frac{\mu_{o} i}{i}$		
$\therefore \vec{B} = \frac{\mu_{\circ} i}{2R} \hat{i}$	1/2	3

24			
	 a) Deriving the expression for energy stored in an inductor. 1 ¹/₂ b) Deriving the energy density of magnetic field. 1 ¹/₂ 		
	a) Induced emf in an inductor dI		
	$\left \varepsilon\right = L \frac{dI}{dt}$	1⁄2	
	Rate of work done at any instant		
	$\frac{dW}{dt} = \left \varepsilon\right I$	1/2	
	Total Amount of work done in establishing current I		
	$W = \int dW = \int_{0}^{1} LI dI$		
	Energy required to build up current I is $W = \frac{1}{2} L I^2$	1/2	
	b) The Magnetic Energy is $W=U_B = \frac{1}{2} LI^2$		
	$= \frac{1}{2} L \left(\frac{B}{n\mu_0}\right)^2 \qquad \text{as} B = n \mu_0 I$	1/2	
	Using L= $\mu_0 n^2 A l$		
	$U_{\rm B} = \frac{1}{2} \left(\mu_0 n^2 A l \right) \left(\frac{B^2}{{\mu_0}^2 n^2} \right)$	1/2	
	Energy density = $\frac{U_B}{\text{volume}}$		
	$\frac{U_{B}}{\text{volume}} = \frac{1}{2} \times \mu_{0} n^{2} A l \times \frac{B^{2}}{\mu_{0}^{2} n^{2}} \times \frac{1}{A l}$		
	$=\frac{1}{2}\frac{B^2}{\mu_0}$	1/2	3
25	a) Showing that $(I_c + I_d)$ has the same value.2b) Explanation of Kirchhoff's first rule at each plate of capacitor.1		
	a) \therefore Total current I = I _c + I _d		
	outside the capacitor	17	
	$I_{d} = 0$ $\therefore I = I_{c}$	1/2	
	Inside the capacitor	17	
	$I_c = 0$	1/2	

	$\therefore I = I_d = \varepsilon_0 \frac{d\phi_E}{dt}$	1/2	
	$= \varepsilon_0 \frac{d}{dt} [EA]$		
	$= \varepsilon_0 \frac{d}{dt} \left[\frac{\sigma}{\varepsilon_0} A \right]$		
	$= \frac{\varepsilon_0}{\varepsilon_0} A \frac{d}{dt} \left[\frac{Q}{A} \right]$	1/2	
	$I = \frac{dQ}{dt} = I_{c}$		
	Alternatively		
	\therefore Total current I = I _c + I _d		
	outside the capacitor		
	$I_d = 0$	1/2	
	$I_{\rm d} = 0$ $\therefore I = I_{\rm c}$	72	
	•	1/2	
	Inside the capacitor	/2	
	$I_c = 0$		
	1.		
	$\mathbf{I} = \mathbf{I}_{d} = \varepsilon_{0} \frac{d\phi_{E}}{dt}$. /	
		1/2	
	$- d \left[Q \right]$		
	$= \varepsilon_0 \frac{d}{dt} \left[\frac{Q}{\varepsilon_0} \right]$		
		1/2	
	$I = \frac{dQ}{dt} = I_c$		
	dt ^{-c}		
	hence $I_c + I_d$ has the same value at all points of the circuit.		
	b) Yes	1	
	Current entering the capacitor is (I_c) and between the plates capacitor is (I_d)	1	
	$I_c = I_d$		
			2
26	which validates Kirchhoff's junction rule.		3
26			
	Reason for		
	a) All photoelectrons not having same Kinetic Energy.		
	b) Having different saturation current for different intensity.		
	c) Stopping of emission of photoelectrons at a certain wavelength. 1		
	a) When monochromatic light is incident on a metal surface then more/less tightly bound	1	
	electrons will emerge with less/more kinetic energy. So all the photoelectrons do not eject		
	with same kinetic energy.		
	b) Maximum number of photoelectrons ejected per second (saturation current) is directly		
	proportional to the Intensity of incident radiation Hence saturation current is different for	1	
	different intensities.	-	

When	hen λ increases, v decreases and energy of incident photon (hv) also decreases. $\lambda > \lambda_0$, v< v ₀ (threshold frequency), no photoelectron is ejected. Emission of electrons stop at $\lambda > \lambda_0$.	1	3
27			
a) b)	Defining Mass Defect1/2Defining Binding Energy1/2Describing Fission Process1/2Calculation of Mass Defect1Calculation of Energy1/2		
Bindir	ifference in the mass of the nucleus and its constituents is defined as mass defect. ng Energy is the energy required to separate the nucleons from the nucleus. sion process a heavy nucleus splits into lighter nuclei and energy is released. As a	$\frac{1/2}{1/2}$	
result	the Binding Energy per nucleon increases.	1/2	
	$m = (m_{p} + m_{n}) - m_{d}$ = (1.007277 + 1.008665) - 2.013553	1/2	
	$= 0.002389 \mathrm{u}$	1/2	
	gy released = $\Delta m \times c^2$		
Energ	gy released = 0.002389 × 931.5 = 2.2253 MeV ≈2.22 MeV	1/2

Marking Scheme Strictly Confidential (For Internal and Restricted use only) Senior School Certificate Examination, 2025 SUBJECT NAME PHYSICS (PAPER CODE 55/1/2)

General Instructions: -

1	You are aware that evaluation is the most important process in the actual and correct assessment of the candidates. A small mistake in evaluation may lead to serious problems which may affect the future of the candidates, education system and teaching profession.
	To avoid mistakes, it is requested that before starting evaluation, you must read and
	understand the spot evaluation guidelines carefully.
2	"Evaluation policy is a confidential policy as it is related to the confidentiality of the
	examinations conducted, Evaluation done and several other aspects. Its' leakage to public in any manner could lead to derailment of the examination system and affect the life and future of millions of candidates. Sharing this policy/document to anyone, publishing in any magazine and printing in News Paper/Website etc may
	invite action under various rules of the Board and IPC."
3	Evaluation is to be done as per instructions provided in the Marking Scheme. It should not
-	be done according to one's own interpretation or any other consideration. Marking
	Scheme should be strictly adhered to and religiously followed. However, while
	evaluating, answers which are based on latest information or knowledge and/or are
	innovative, they may be assessed for their correctness otherwise and due marks be
	awarded to them. In class-X, while evaluating two competency-based questions,
	please try to understand given answer and even if reply is not from marking scheme
	but correct competency is enumerated by the candidate, due marks should be
	awarded.
4	The Marking scheme carries only suggested value points for the answers
	These are in the nature of Guidelines only and do not constitute the complete answer. The
	students can have their own expression and if the expression is correct, the due marks
5	should be awarded accordingly.The Head-Examiner must go through the first five answer books evaluated by each
5	evaluator on the first day, to ensure that evaluation has been carried out as per the
	instructions given in the Marking Scheme. If there is any variation, the same should be
	zero after delibration and discussion. The remaining answer books meant for evaluation
	shall be given only after ensuring that there is no significant variation in the marking of
	individual evaluators.
6	Evaluators will mark($$) wherever answer is correct. For wrong answer CROSS 'X" be
	marked. Evaluators will not put right () while evaluating which gives an impression that</td
	answer is correct and no marks are awarded. This is most common mistake which
	evaluators are committing.
7	If a question has parts, please award marks on the right-hand side for each part. Marks
	awarded for different parts of the question should then be totaled up and written in the left-
	hand margin and encircled. This may be followed strictly.
8	If a question does not have any parts, marks must be awarded in the left-hand margin and
	encircled. This may also be followed strictly.
9	If a student has attempted an extra question, answer of the question deserving more
	marks should be retained and the other answer scored out with a note "Extra Question".
10	No marks to be deducted for the cumulative effect of an error. It should be penalized only
11	A full scale of marks70(example 0 to 80/70/60/50/40/30 marks as given in
	Question Paper) has to be used. Please do not hesitate to award full marks if the answer

	deserves it.
12	Every examiner has to necessarily do evaluation work for full working hours i.e., 8 hours every day and evaluate 20 answer books per day in main subjects and 25 answer books per day in other subjects (Details are given in Spot Guidelines). This is in view of the reduced syllabus and number of questions in question paper.
13	 Ensure that you do not make the following common types of errors committed by the Examiner in the past:- Leaving answer or part thereof unassessed in an answer book. Giving more marks for an answer than assigned to it. Wrong totaling of marks awarded on an answer. Wrong transfer of marks from the inside pages of the answer book to the title page. Wrong question wise totaling on the title page. Wrong totaling of marks of the two columns on the title page. Wrong grand total. Marks in words and figures not tallying/not same. Wrong transfer of marks from the answer book to online award list. Answers marked as correct, but marks not awarded. (Ensure that the right tick mark is correctly and clearly indicated. It should merely be a line. Same is with the X for incorrect answer.) Half or a part of answer marked correct and the rest as wrong, but no marks awarded.
14	While evaluating the answer books if the answer is found to be totally incorrect, it should be marked as cross (X) and awarded zero (0)Marks.
15	Any un assessed portion, non-carrying over of marks to the title page, or totaling error detected by the candidate shall damage the prestige of all the personnel engaged in the evaluation work as also of the Board. Hence, in order to uphold the prestige of all concerned, it is again reiterated that the instructions be followed meticulously and judiciously.
16	The Examiners should acquaint themselves with the guidelines given in the " Guidelines for spot Evaluation " before starting the actual evaluation.
17	Every Examiner shall also ensure that all the answers are evaluated, marks carried over to the title page, correctly totaled and written in figures and words.
18	The candidates are entitled to obtain photocopy of the Answer Book on request on payment of the prescribed processing fee. All Examiners/Additional Head Examiners/Head Examiners are once again reminded that they must ensure that evaluation is carried out strictly as per value points for each answer as given in the Marking Scheme.

a) Magnetic moment of a current carrying coil is defined as the product of 1		a) Magnetic moment of a current carrying coil is defined as the product of	1	

	arment flowing through the soil and Area of the soil		
	current flowing through the coil and Area of the coil. Alternatively		
	$\vec{M} = I\vec{A}$		
	S.I. unit is Am ²	1/2	
	b) $\tau = \text{NIABsin}\theta$		
	$\tau_1 = 0.12 = 60 \times 2 \times 1.5 \times 10^{-3} \times Bsin\theta$		
	$B\sin\theta = \frac{2}{3}$	1/2	
	$\tau_2 = 0.05 = 60 \times 2 \times 1.5 \times 10^{-3} \times B\cos\theta$		
	$B\cos\theta = \frac{5}{18}$	1/2	
	$B = \sqrt{B^2 \sin^2 \theta + B^2 \cos^2 \theta}$		
	$=\sqrt{\left(rac{2}{3} ight)^2+\left(rac{5}{18} ight)^2}=rac{13}{18}\mathrm{T}$	1/2	3
24	Deriving the expression for mutual Inductance2Showing $M_{21} = M_{12}$ 1		
	r, turns N ₂ turns	1∕2	
	Let N_1 and N_2 be the total number of turns of coils S_1 and S_2 respectively. When current I_2 is set up in S_2 , flux linkage with solenoid S_1 is –		
	$\mathbf{N}_1 \boldsymbol{\phi}_1 = \mathbf{M}_{12} \mathbf{I}_2 \qquad(\mathbf{i})$	1/2	
	$N_1 \phi_1 = (n_1 l) (\pi r_1^2) (\mu_0 n_2 I_2)$		
	$N_1 \phi_1 = \mu_0 n_1 n_2 \pi r_1^2 l I_2$ (ii) From (i) and (ii)	1/2	
	$M_{12} = \mu_0 n_1 n_2 \pi r_1^2 l$	1/2	

Considering Deverse acco when I extract is get we in C flow links - with C		
Considering Reverse case, when I_1 current is set up in S_1 , flux linkage with S_2 is –		
$ \mathbf{N}_{2}\boldsymbol{\phi}_{2} = \mathbf{M}_{21}\mathbf{I}_{1} \qquad(\mathbf{i}\mathbf{i}\mathbf{i}) $		
	1/2	
$N_{2}\phi_{2} = (n_{2}l)(\pi r_{1}^{2})(\mu_{0}n_{1}I_{1})(iv)$		
From (iii) and (iv)		
$M_{21} = n_1 n_2 \pi r_1^2 l$		
$\therefore M_{12} = M_{21}$		-
	1/2	3
25a) Showing that $(I_c + I_d)$ has the same value.2		
b) Explanation of Kirchhoff's first rule at each plate of capacitor. 1		
a) \therefore Total current I = I _c + I _d		
outside the capacitor		
$I_d = 0$	1/2	
\therefore I = I _c		
Inside the capacitor		
$I_c = 0$	1/2	
$\therefore \ \mathrm{I} = \mathrm{I}_{\mathrm{d}} = \varepsilon_0 \frac{d\phi_{\mathrm{E}}}{dt}$		
$= \varepsilon_0 \frac{d}{dt} [EA]$	1/2	
	72	
$= \varepsilon_0 \frac{d}{dt} \left[\frac{\sigma}{\varepsilon_0} A \right]$		
$= \varepsilon_0 \frac{\partial t}{\partial t} \frac{\partial r}{\partial t} A$		
$= \frac{\varepsilon_0}{\varepsilon_0} A \frac{d}{dt} \left[\frac{Q}{A} \right]$		
$I = \frac{dQ}{dt} = I_{c}$	1.4	
	1/2	
Alternatively		
$\therefore \text{ Total current } I = I_c + I_d$ outside the capacitor		
$I_d = 0$	1/2	
$\therefore I = I_c$		
Inside the capacitor		
$I_c = 0$	1/2	
$\mathrm{I} = \mathrm{I_d} = \ arepsilon_0 rac{d\phi_{\scriptscriptstyle E}}{dt}$		
	1/2	
$= \varepsilon_0 \frac{d}{dt} \left[\frac{Q}{\varepsilon_0} \right]$		
$\int \int dt \left[\varepsilon_0 \right]$		
$I = \frac{dQ}{dt} = I_c$	1/2	
$\mathbf{I} = \frac{\mathbf{I} - \mathbf{I}_{c}}{\mathbf{d}t} - \mathbf{I}_{c}$	12	
hence $I_c + I_d$ has the same value at all points of the circuit.

Marking Scheme Strictly Confidential (For Internal and Restricted use only) Senior School Certificate Examination, 2025 SUBJECT NAME PHYSICS (PAPER CODE 55/1/3)

General Instructions: -

1	You are aware that evaluation is the most important process in the actual and correct
	assessment of the candidates. A small mistake in evaluation may lead to serious problems
	which may affect the future of the candidates, education system and teaching profession.
	To avoid mistakes, it is requested that before starting evaluation, you must read and
_	understand the spot evaluation guidelines carefully.
2	"Evaluation policy is a confidential policy as it is related to the confidentiality of the examinations conducted, Evaluation done and several other aspects. Its' leakage to
	public in any manner could lead to derailment of the examination system and affect
	the life and future of millions of candidates. Sharing this policy/document to
	anyone, publishing in any magazine and printing in News Paper/Website etc may
	invite action under various rules of the Board and IPC."
3	Evaluation is to be done as per instructions provided in the Marking Scheme. It should not
	be done according to one's own interpretation or any other consideration. Marking
	Scheme should be strictly adhered to and religiously followed. However, while
	evaluating, answers which are based on latest information or knowledge and/or are
	innovative, they may be assessed for their correctness otherwise and due marks be
	awarded to them. In class-X, while evaluating two competency-based questions,
	please try to understand given answer and even if reply is not from marking scheme
	but correct competency is enumerated by the candidate, due marks should be
	awarded.
4	The Marking scheme carries only suggested value points for the answers
	These are in the nature of Guidelines only and do not constitute the complete answer. The
	students can have their own expression and if the expression is correct, the due marks
_	should be awarded accordingly.
5	The Head-Examiner must go through the first five answer books evaluated by each
	evaluator on the first day, to ensure that evaluation has been carried out as per the
	instructions given in the Marking Scheme. If there is any variation, the same should be zero after delibration and discussion. The remaining answer books meant for evaluation
	shall be given only after ensuring that there is no significant variation in the marking of
	individual evaluators.
6	Evaluators will mark($$) wherever answer is correct. For wrong answer CROSS 'X" be
	marked. Evaluators will not put right (\checkmark) while evaluating which gives an impression that
	answer is correct and no marks are awarded. This is most common mistake which
	evaluators are committing.
7	If a question has parts, please award marks on the right-hand side for each part. Marks
	awarded for different parts of the question should then be totaled up and written in the left-
	hand margin and encircled. This may be followed strictly.
8	If a question does not have any parts, marks must be awarded in the left-hand margin and
	encircled. This may also be followed strictly.
9	If a student has attempted an extra question, answer of the question deserving more
	marks should be retained and the other answer scored out with a note "Extra Question".
10	No marks to be deducted for the cumulative effect of an error. It should be penalized only
	once.
11	A full scale of marks70(example 0 to 80/70/60/50/40/30 marks as given in
	Question Paper) has to be used. Please do not hesitate to award full marks if the answer

	deserves it.
12	Every examiner has to necessarily do evaluation work for full working hours i.e., 8 hours every day and evaluate 20 answer books per day in main subjects and 25 answer books per day in other subjects (Details are given in Spot Guidelines). This is in view of the reduced syllabus and number of questions in question paper.
13	 Ensure that you do not make the following common types of errors committed by the Examiner in the past:- Leaving answer or part thereof unassessed in an answer book. Giving more marks for an answer than assigned to it. Wrong totaling of marks awarded on an answer. Wrong transfer of marks from the inside pages of the answer book to the title page. Wrong question wise totaling on the title page. Wrong totaling of marks of the two columns on the title page. Wrong grand total. Marks in words and figures not tallying/not same. Wrong transfer of marks from the answer book to online award list. Answers marked as correct, but marks not awarded. (Ensure that the right tick mark is correctly and clearly indicated. It should merely be a line. Same is with the X for incorrect answer.) Half or a part of answer marked correct and the rest as wrong, but no marks awarded.
14	While evaluating the answer books if the answer is found to be totally incorrect, it should be marked as cross (X) and awarded zero (0)Marks.
15	Any un assessed portion, non-carrying over of marks to the title page, or totaling error detected by the candidate shall damage the prestige of all the personnel engaged in the evaluation work as also of the Board. Hence, in order to uphold the prestige of all concerned, it is again reiterated that the instructions be followed meticulously and judiciously.
16	The Examiners should acquaint themselves with the guidelines given in the " Guidelines for spot Evaluation " before starting the actual evaluation.
17	Every Examiner shall also ensure that all the answers are evaluated, marks carried over to the title page, correctly totaled and written in figures and words.
18	The candidates are entitled to obtain photocopy of the Answer Book on request on payment of the prescribed processing fee. All Examiners/Additional Head Examiners/Head Examiners are once again reminded that they must ensure that evaluation is carried out strictly as per value points for each answer as given in the Marking Scheme.

	b)		
	$\mathbf{v}_{crv} - \mathbf{v}_{trv}$	1/2 + 1/2	
	$V_{Rm} = i_m R , V_{Cm} = i_m X_c , V_{Lm} = i_m X_L$ From Phasor diagram $V_m^{2} = V_{Rm}^{2} + (V_{Cm} - V_{Lm})^2$ $V_m^{2} = (i_m R)^2 + (i_m X_c - i_m X_L)^2$	1/2	

Page 8 of 18

	$= \left(i_{m}\right)^{2} \left[R^{2} + \left(X_{c} - X_{L}\right)^{2}\right]$		
	Or $i_m = \frac{V_m}{\sqrt{R^2 + (X_c - X_L)^2}}$	17	
	$\sqrt{R^2 + \left(X_c - X_L\right)^2}$	1/2	
	$\therefore i_m = \frac{V_m}{Z}$		
	$\therefore Z = \sqrt{R^2 + \left(X_c - X_L\right)^2}$	1/2	
	From phasor diagram		
	$V_{Cm} - V_{Lm}$		
	$\tan\theta = \frac{V_{Cm} - V_{Lm}}{V_{Rm}}$		
	$=\frac{X_c - X_L}{R}$		
		1/2	3
	$\therefore \theta = \tan^{-1} \left(\frac{X_c - X_L}{R} \right)$	72	3
25	a) Showing that $(I_c + I_d)$ has the same value. 2		
	b) Explanation of Kirchhoff's first rule at each plate of capacitor. 1		
	a) : Total current $I = I_c + I_d$		
	outside the capacitor		
	$I_d = 0$	1/2	
	\therefore I = I _c		
	Inside the capacitor		
	$I_c = 0$	1/2	
	$\therefore I = I_{d} = \varepsilon_{0} \frac{d\phi_{E}}{dt}$		
	d_{r-1}	1/2	
	$= \varepsilon_0 \frac{d}{dt} [EA]$		
	$= \varepsilon_0 \frac{d}{dt} \left[\frac{\sigma}{\varepsilon_0} A \right]$		
	$= \frac{\varepsilon_0}{\varepsilon_0} A \frac{d}{dt} \left[\frac{Q}{A} \right]$		
	$I = \frac{dQ}{dt} = I_c$	1/2	
	Alternatively \therefore Total current I = I _c + I _d		
	outside the capacitor		
	$I_d = 0$	1/2	
	\therefore I = I _c		
	Inside the capacitor		
	$I_c = 0$	1/2	

	1		
	$\mathbf{I} = \mathbf{I}_{\mathrm{d}} = \varepsilon_0 \frac{d\phi_E}{dt}$	1/2	
	$I = I_{d} = \varepsilon_{0} \frac{d\phi_{E}}{dt}$ $= \varepsilon_{0} \frac{d}{dt} \left[\frac{Q}{\varepsilon_{0}} \right]$ $I = \frac{dQ}{dt} = I_{c}$	1/2	
	hence $I_c + I_d$ has the same value at all points of the circuit.	1	
	 b) Yes Current entering the capacitor is (I_c) and between the plates capacitor is (I_d) I_c=I_d which validates. Kirchhoff's junction rule 		3
