Marking Scheme Strictly Confidential (For Internal and Restricted use only) Senior School Certificate Examination, 2025 SUBJECT NAME PHYSICS (PAPER CODE 55/2/1)

General Instructions: -

1	You are aware that evaluation is the most important process in the actual and correct assessment of the candidates. A small mistake in evaluation may lead to serious problems which may affect the future of the candidates, education system and teaching profession. To avoid mistakes, it is requested that before starting evaluation, you must read and understand the spot evaluation guidelines carefully.
2	"Evaluation policy is a confidential policy as it is related to the confidentiality of the
	examinations conducted, Evaluation done and several other aspects. Its' leakage to
	public in any manner could lead to derailment of the examination system and affect
	the life and future of millions of candidates. Sharing this policy/document to anyone,
	publishing in any magazine and printing in News Paper/Website etc. may invite
	action under various rules of the Board and IPC."
3	Evaluation is to be done as per instructions provided in the Marking Scheme. It should not
	be done according to one's own interpretation or any other consideration. Marking Scheme
	should be strictly adhered to and religiously followed. However, while evaluating,
	answers which are based on latest information or knowledge and/or are innovative,
	they may be assessed for their correctness otherwise and due marks be awarded to
	them. In Class-X, while evaluating two competency-based questions, please try to
	understand given answer and even if reply is not from marking scheme but correct
4	competency is enumerated by the candidate, due marks should be awarded.
4	The Marking scheme carries only suggested value points for the answers These are in the nature of Guidelines only and do not constitute the complete answer. The
	students can have their own expression and if the expression is correct, the due marks
	should be awarded accordingly.
5	The Head-Examiner must go through the first five answer books evaluated by each
•	evaluator on the first day, to ensure that evaluation has been carried out as per the
	instructions given in the Marking Scheme. If there is any variation, the same should be zero
	after deliberation and discussion. The remaining answer books meant for evaluation shall
	be given only after ensuring that there is no significant variation in the marking of
	individual evaluators.
6	Evaluators will mark ($$) wherever answer is correct. For wrong answer CROSS 'X" be
	marked. Evaluators will not put right (\checkmark) while evaluating which gives an impression that
	answer is correct and no marks are awarded. This is most common mistake which
	evaluators are committing.
7	If a question has parts, please award marks on the right-hand side for each part. Marks
	awarded for different parts of the question should then be totaled up and written in the left-
	hand margin and encircled. This may be followed strictly.
8	If a question does not have any parts, marks must be awarded in the left-hand margin and
	encircled. This may also be followed strictly.
9	If a student has attempted an extra question, answer of the question deserving more marks
	should be retained and the other answer scored out with a note "Extra Question".

10	No marks to be deducted for the cumulative effect of an error. It should be penalized only
	once.
11	A full scale of marks 70 (example 0 to 80/70/60/50/40/30 marks as given in Question
	Paper) has to be used. Please do not hesitate to award full marks if the answer deserves it.
12	Every examiner has to necessarily do evaluation work for full working hours i.e., 8 hours
	every day and evaluate 20 answer books per day in main subjects and 25 answer books per
	day in other subjects (Details are given in Spot Guidelines). This is in view of the reduced
	syllabus and number of questions in question paper.
13	Ensure that you do not make the following common types of errors committed by the
	Examiner in the past: -
	• Leaving answer or part thereof unassessed in an answer book.
	• Giving more marks for an answer than assigned to it.
	• Wrong totaling of marks awarded on an answer.
	• Wrong transfer of marks from the inside pages of the answer book to the title page.
	• Wrong question wise totaling on the title page.
	• Wrong totaling of marks of the two columns on the title page.
	• Wrong grand total.
	• Marks in words and figures not tallying/not same.
	• Wrong transfer of marks from the answer book to online award list.
	• Answers marked as correct, but marks not awarded. (Ensure that the right tick mark is
	correctly and clearly indicated. It should merely be a line. Same is with the X for
	incorrect answer.)
	• Half or a part of answer marked correct and the rest as wrong, but no marks awarded.
14	While evaluating the answer books if the answer is found to be totally incorrect, it should
	be marked as cross (X) and awarded zero (0)Marks.
15	Any un assessed portion, non-carrying over of marks to the title page, or totaling error
	detected by the candidate shall damage the prestige of all the personnel engaged in the
	evaluation work as also of the Board. Hence, in order to uphold the prestige of all
	concerned, it is again reiterated that the instructions be followed meticulously and
	judiciously.
16	The Examiners should acquaint themselves with the guidelines given in the "Guidelines
	for spot Evaluation" before starting the actual evaluation.
17	Every Examiner shall also ensure that all the answers are evaluated, marks carried over to
	the title page, correctly totaled and written in figures and words.
18	The candidates are entitled to obtain photocopy of the Answer Book on request on payment
	of the prescribed processing fee. All Examiners/Additional Head Examiners/Head
	Examiners are once again reminded that they must ensure that evaluation is carried out
	strictly as per value points for each answer as given in the Marking Scheme.

	MARKING SCHEME: PHYSICS(042)			
	Code: 55/2/1			
Q.No.	VALUE POINTS/EXPECTED ANSWERS	Marks	Total Marks	
	SECTION A			
1.	(D) CM	1	1	
2.	(C) two resistors in series and then this combination in parallel with the third resistor.	1	1	
3.	(C) $\frac{5.0}{\sqrt{2}} \times 10^{-10} \hat{k} \mathrm{T}$	1	1	
4.	(A) $\frac{\mu_0}{4\pi} x \frac{2M}{r^3}$	1	1	
5.	(B) Z to Y and then Y to Z	1	1	
6.	(C) $v\uparrow \longrightarrow t$ $0^{1} T_{l_{2}}T$	1	1	
7.	(D) 6750	1	1	
8.	(A) conservative and field lines do not form closed loops	1	1	
9.	(A) $1.6 \times 10^8 \mathrm{ms}^{-1}$	1	1	
10.	(C) Lyman series	1	1	
11.	(D) 5	1	1	
12.	(A) resistor / (C) capacitor	1	1	
13.	(A) If both Assertion (A) and Reason (R) are true and Reason (R) is the correct explanation of Assertion (A).	1	1	
14.	(C) If Assertion (A) is true and Reason (R) is false.	1	1	
15.	(C) If Assertion (A) is true and Reason (R) is false.	1	1	
16.	(B) If both Assertion (A) and Reason (R) are true and Reason (R) is not the correct explanation of Assertion (A).	1	1	

	SECTION B		
17.	(a)		
	Finding current2		
		1/	
	$R_1 = \frac{\rho l_1}{A}; R_2 = \frac{\rho l_2}{A}$	1⁄2	
	$\frac{l_1}{l_2} = \frac{2}{3} \Longrightarrow \frac{R_1}{R_2} = \frac{2}{3}$		
	$I \alpha \frac{1}{R}$	1/2	
	$=>\frac{I_1}{I_2}=\frac{3}{2}$	/ 2	
	$=> I_1 = \frac{3}{5} \times 15 = 9A$	1⁄2	
	$= \frac{I_1}{I_2} = \frac{3}{2}$ => $I_1 = \frac{3}{5} \times 15 = 9A$ => $I_2 = \frac{2}{5} \times 15 = 6A$	1⁄2	
	OR		
	(b)		
	Finding the potential difference		
	(i) between P and Q 1		
	(ii) across capacitor C 1		
	In steady state, 2V - V = i(2R+R)		
	$i = \frac{V}{3R}$		
	(i) $V_P - V_Q = -V - iR$		
	$= -V - \frac{V}{3}$		
	$V_{\rm P} - V_{\rm Q} = -\frac{4V}{3}$	1	
	(ii) $V_p - V_q = -V + V_c$		
	$-\frac{4\mathrm{V}}{3} = -\mathrm{V} + \mathrm{V}_{\mathrm{C}}$	1	
	$V_c = -\frac{V}{3}$		
	5		2

Finding the relation2		
Phase difference for 6 th dark fringe = 11π	1/2	
Phase difference for 8^{th} bright fringe = 16π	1/2	
$\Delta \phi + \phi_6 = \phi_8$	1/2	
$2\pi(n-1)\frac{t}{\lambda}+11\pi=16\pi$		
	1/2	
$t = \frac{5\lambda}{2(n-1)}$		
<u>Alternatively</u> : -		
Path difference for 6 th dark fringe $(x_6) = \frac{11\lambda}{2}$	1/2	
Path difference for 8^{th} bright fringe $(x_8) = 8\lambda$	1/2	
Increase in path difference after introducing the sheet (Δx)		
$=\frac{\lambda}{2\pi} \times 2\pi (n-1) \frac{t}{\lambda} = (n-1)t$		
20 //	1/2	
$\therefore x_6 + \Delta x = x_8$ $\frac{11\lambda}{2} + (n-1)t = 8\lambda$		
$\frac{1}{2}$ + (n-1) t = 8 λ		
On solving:-		
$t = \frac{5\lambda}{2(n-1)}$	1/2	
2(n-1)	/ 2	
		2

19.			
17.	Finding the position and nature of the final image $1\frac{1}{2} + \frac{1}{2}$	2	
	For the first lens: -		
	$\begin{vmatrix} \frac{1}{v_1} - \frac{1}{u_1} = \frac{1}{f_1} \\ 1 & 1 & 1 \end{vmatrix}$	1/2	
	$\frac{1}{v_1} + \frac{1}{4} = -\frac{1}{8}$ $v_1 = -\frac{8}{3}$ cm	1/2	
	For the second lens: - $u_2 = -16 - \frac{8}{3} = -\frac{56}{3}$ cm		
	$\frac{1}{v_2} - \left(-\frac{3}{56}\right) = -\frac{1}{8}$		
	$v_2 = -5.6$ cm	1/2	
	Image is virtual.	1/2	2
20.	Calculating Speed 2		
	$hv = \phi_o + K_{max}$ $\frac{hc}{\lambda} = \phi_0 + \frac{1}{2}mv_{max}^2$	1⁄2	
	$\frac{\overline{\lambda} = \psi_0 + \frac{1}{2} \text{ mv}_{\text{max}}}{\frac{6.63 \times 10^{-34} \times 3 \times 10^8}{4 \times 10^{-7}} = 3 \times 10^{-19} + \frac{1}{2} \text{ mv}_{\text{max}}^2$	1⁄2	
	$\frac{4x10^{-7}}{4}x10^{-19} = 3x10^{-19} + \frac{1}{2}mv_{max}^2$	1/2	
	$\frac{4x10^{-19}}{9x10^{-31}} = v_{max}^2$	72	
	$v_{max} = \frac{2}{3} \times 10^6 \text{m/s}$	1⁄2	
			2

21.			
21.	Finding the value of V.2		
	$V - V_o = IR$	1/2	
	V - $0.7 = (15 \times 10^{-3}) \times 1000$	1	
	V = 15.7 volt	1⁄2	2
	SECTION C		
22.			
	(a) Obtaining the relationship between V, E, R and r1(b) Graph showing variation of V as a function of I1Determining EMF and internal resistance1from graph $\frac{1}{2} + \frac{1}{2}$		
	(a) Current drawn from the cell (I) = $\frac{E}{r+R}$	1⁄2	
	Potential difference (V)=IR $V = \frac{ER}{r+R}$	1/2	
	(b) f_{I}	1 1/2 1/2	
	The intercept on Y-axis gives the emf of the cell.	1/2	3

Page 8 of 19

	More the field law to complete matrice encoded $\mathbf{L}_{\mathbf{D}}$	1⁄2	
	Magnetic field due to conductor carrying current I ₁ $(\vec{B}_1) = \frac{\mu_0 I_1}{2\pi Y} (-\hat{k})$		
	Magnetic field due to conductor Carrying current I ₂ $(\vec{B}_2) = \frac{\mu_0 I_2}{2\pi X} (\hat{k})$	1⁄2	
	$\vec{\mathbf{B}}_{\mathrm{P}} = \vec{\mathbf{B}}_{1} + \vec{\mathbf{B}}_{2}$ $\vec{\mathbf{B}}_{\mathrm{P}} = \frac{\mu_{0}}{2\pi} \left[\frac{\mathbf{I}_{2}}{\mathbf{X}} - \frac{\mathbf{I}_{1}}{\mathbf{Y}} \right] \hat{k}$	1	
	Direction will be along the Z-axis.	1	3
24.		1	5
	(a) Statement of Lenz's law1/2(b) (i) Identifying the machine1/2(ii) Naming parts P and Q and R1/2(iii) Giving polarities1/2(iv) Two ways of increasing output voltage1/2 +1/2	1/2	
	current which opposes the change in magnetic flux that produced it.		
	(b) (i) AC generator	1⁄2	
	 (ii) P – Slip rings Q – Carbon brushes R- Armature coil 	1⁄2	
	(iii) Left side of the magnet is North & right side is South or vice-versa.	1⁄2	
	(iv) (Any two)		
	-By increasing the number of turns in the armature coil. -By increasing the speed of rotation of the armature coil. -By increasing the strength of the magnetic field B.	1/2 + 1/2	
			3

25.			
	 (a) Describing the direction of magnetic field (b) To state whether wavelength of radiowaves & microwaves is 		
	greater or lesser than visible light 1 (c) Use of:		
	(i) Infrared waves ¹ / ₂		
	(i) Gamma rays ¹ / ₂		
	(a) Magnetic field oscillates in the east-west direction as it is mutually perpendicular to the direction of electric field.	1	
	(b) Wavelength of the radiowaves and microwaves is longer than visible light.	1	
	(c) (i) Use of infrared waves: - (Any one)		
	- Used for physical therapy.		
	- Used for maintaining average temperature of the earth.		
	Used in Earth satellites for military purposes & to observe growth of crops.Used in remote control	1⁄2	
	(ii)Use of Gamma rays: - (Any one)		
	- Used in treatment of cancer.		
	- Used in diagnostic imaging.	1/2	
	- Used to sterilize medical equipment		3
26.			3
	(a) Effect on the width of the beam 1		
	(b) Ray diagram 1		
	(c) Diagram showing transmission 1		
	(a) Width of the parallel beam of light increases in water.	1	
	<u>Alternatively</u> : - If a student explains using diagram, full credit to be given.		
	(b) Due to refraction of light, the image of the portion immersed in water appears to be raised.		
	Air		
		1	

28.			
	(a) Defining majority and minority charge carries in an extrinsic semiconductor $\frac{1}{2}+\frac{1}{2}$ (b) Describing movement of the charge carriers when pn-junction diode is forward biased1(c) Estimating Dynamic resistance1		
	(a) In an extrinsic semiconductor, the charge carriers whose number density is large are known as majority charge carriers.	1/2+1/2	
	In an extrinsic semiconductor, the charge carriers whose number density is small are known as minority charge carriers.		
	(b) Due to the applied forward voltage, electrons from n-side cross the depletion region and reach p-side. Similarly, holes from p-side cross the junction and reach the n-side. Due to the movement of these charge carriers current is produced.	1	
	(c) At V = -0.6 volt, I = 0, so dynamic resistance is infinite.	1	2
	SECTION D		3
29.		1	
	(i) (C) $\frac{E}{4}$		
	(ii) (D) $V = \frac{1}{d}$	1	
	(iii) (C) $E $ \uparrow M N	1	
	(iv) (A) $(\vec{E}_1 + \vec{E}_2).\vec{d}$		
	OR	1	
	(C) CK		4

	(ii) (C) me	1	
	(iii) Full 1 mark to be awarded to all the students who have attempted this part of the question.	1	
	OR		
	(B) $\frac{1}{2}, \frac{1}{2}$		
	(iv) (D) 13.3 μm	1	
			4
	SECTION E		
31.	(a)		
	(i) Calculating final potential- on sphere A- on shell B(ii) Two characteristics ofof equipotential surface1/2+1/2Finding potential at (4m,3m)2		
	(i) Potential on sphere A = V = $\frac{Q}{4\pi\epsilon_0 r}$ Charge on sphere A = $4\pi\epsilon_0 r V$	1⁄2	
	The charge is transferred to shell B. Potential on shell B = $\frac{1}{4\pi\epsilon_0} x \frac{4\pi\epsilon_0 rV}{R}$		
	Potential on shell $B = \frac{rV}{R}$	1⁄2	
	Potential on sphere A = Potential on shell B	1	
	 (ii) Characteristics of equipotential surfaces: - (Any two) - Potential at all points on the surface is same. - Equipotential surface is normal to the direction of the electric field. - The work done in moving a charge on an equipotential surface is zero. 	1/2+1/2	

	(iii) Total charge enclosed by $S_1 = (-3-2+9) \mu C = 4 \mu C$ Total charge enclosed by $S_2 = Q + 4 \mu C$	1/2	
		1/2	
	$ \begin{array}{c} \varepsilon_{0} \\ Q = 12 \mu C \end{array} $	1/2	5
32.	(a)		5
	(i) Source of force ½ Obtaining expression for force 1½ Definition of 'ampere' 1 (ii) Finding work done by the magnetic force 1 (iii) Necessary conditions 1 Reason – (i) The source of force is the interaction between the field produced by the current carrying conductor and the external field in which it is placed.	1⁄2	
	Two long parallel conductors a & b, separated by a distance d, carrying currents I _a and I _b , respectively. The magnetic field due to a, $B_{a} = \frac{\mu_{0}I_{a}}{2\pi d}$ The force F _{ba} , is the force on a segment L of 'b' due to 'a'. F _{ba} = I _b LB _a $= \frac{\mu_{0}I_{a}I_{b}}{2\pi d}L$	1⁄2 1	
	Definition – The 'ampere' is that value of steady current which, when maintained in each of the two very long, straight, parallel conductors of negligible cross-section, and	1	

(ii) Work done by the magnetic fame of the share is seen for i	1
(ii) Work done by the magnetic force on the charge is zero as force is perpendicular to \vec{v} .	1
(iii) The velocity (\vec{v}) is at an arbitrary angle θ w.r.t the magnetic field (\vec{B}) .	1
OR	
(b)	
(i) Explanation 1	
(ii) Obtaining relation for \vec{M} , and direction of \vec{M} . 1+1	
(iii) Net force on coil 1	
Obtaining orientation1/2Showing flux is maximum1/2	
Showing flux is maximum 1/2	
(i) The two faces of a current carrying loop behave like two poles of a magnet	1
therefore can be considered as a magnetic dipole placed along its axis.	1
(ii) Magnetic moment (M) α Current (I)	
α Area (A)	
$\therefore \vec{\mathbf{M}} = \mathbf{I}\vec{\mathbf{A}}$	1
Direction is same as the area vector.	1
<u>Alternatively</u> : -	
Magnetic moment is perpendicular to the plane of the coil.	
(iii) Net force acting on the coil is zero.	1
The potential energy (U_B) of a current carrying loop in an external magnetic	
field =- \vec{M} . \vec{B}	
For the coil to be in stable equilibrium U_{B} should be minimum so $\theta = 0^{\circ}$.	1⁄2
Therefore, magnetic flux (ϕ) due to the total field = ($\mathbf{B}_{coil} + \mathbf{B}_{ext}$) A, which is	1/2
its maximum value.	/2
<u>Alternatively</u> : -	
Orientation of stable equilibrium is one where the area vector A of the loop is	
in the direction of external magnetic field. In this orientation, the magnetic field	
produced by the loop is in the same direction as external field, both normal to	

(a)		
(i) Calculating magnification 2 ¹ / ₂		
(ii) Showing emergent ray is normal $1\frac{1}{2}$		
Finding refractive index 1		
(i) As the pencil lies between f and 2f such that one end of the pencil coincides with 2f.		
Position of the other end (u) = $-\left(2f - \frac{f}{4}\right) = -\frac{7f}{4}$	1/2	
Magnification (m) = $\frac{f}{f - u}$	1⁄2	
$=\frac{-f}{-f-\left(-\frac{7f}{4}\right)}$	1⁄2	
$m = -\frac{4}{3}$	1	
<u>Alternatively: -</u>		
As the pencil lies between f and 2f such that one end of the pencil coincides with 2f.		
Position of the other end (u) = $-\left(2f - \frac{f}{4}\right) = -\frac{7f}{4}$	1⁄2	
$\frac{1}{v} + \frac{1}{u} = \frac{1}{f}$	1/2	
$\frac{1}{v} - \frac{4}{7f} = -\frac{1}{f}$		
$\frac{1}{v} = -\frac{1}{f} + \frac{4}{7f}$		
v f f 7f	1/2	
$v = -\frac{7f}{3}$

Marking Scheme Strictly Confidential (For Internal and Restricted use only) Senior School Certificate Examination, 2025 SUBJECT NAME PHYSICS (PAPER CODE 55/2/2)

General Instructions: -

1	You are aware that evaluation is the most important process in the actual and correct assessment of the candidates. A small mistake in evaluation may lead to serious problems which may affect the future of the candidates, education system and teaching profession. To avoid mistakes, it is requested that before starting evaluation, you must read and understand the spot evaluation guidelines carefully.
2	"Evaluation policy is a confidential policy as it is related to the confidentiality of the examinations conducted, Evaluation done and several other aspects. Its' leakage to public in any manner could lead to derailment of the examination system and affect the life and future of millions of candidates. Sharing this policy/document to anyone, publishing in any magazine and printing in News Paper/Website etc. may invite action under various rules of the Board and IPC."
3	Evaluation is to be done as per instructions provided in the Marking Scheme. It should not be done according to one's own interpretation or any other consideration. Marking Scheme should be strictly adhered to and religiously followed. However , while evaluating, answers which are based on latest information or knowledge and/or are innovative, they may be assessed for their correctness otherwise and due marks be awarded to them. In Class-X, while evaluating two competency-based questions, please try to understand given answer and even if reply is not from marking scheme but correct competency is enumerated by the candidate, due marks should be awarded.
4	The Marking scheme carries only suggested value points for the answers These are in the nature of Guidelines only and do not constitute the complete answer. The students can have their own expression and if the expression is correct, the due marks should be awarded accordingly.
5	The Head-Examiner must go through the first five answer books evaluated by each evaluator on the first day, to ensure that evaluation has been carried out as per the instructions given in the Marking Scheme. If there is any variation, the same should be zero after deliberation and discussion. The remaining answer books meant for evaluation shall be given only after ensuring that there is no significant variation in the marking of individual evaluators.
6	Evaluators will mark ($$) wherever answer is correct. For wrong answer CROSS 'X" be marked. Evaluators will not put right (\checkmark) while evaluating which gives an impression that answer is correct and no marks are awarded. This is most common mistake which evaluators are committing.
7	If a question has parts, please award marks on the right-hand side for each part. Marks awarded for different parts of the question should then be totaled up and written in the left-hand margin and encircled. This may be followed strictly.
8	If a question does not have any parts, marks must be awarded in the left-hand margin and encircled. This may also be followed strictly.
9	If a student has attempted an extra question, answer of the question deserving more marks should be retained and the other answer scored out with a note "Extra Question".
10	No marks to be deducted for the cumulative effect of an error. It should be penalized only once.
11	A full scale of marks 70 (example 0 to 80/70/60/50/40/30 marks as given in Question Paper) has to be used. Please do not hesitate to award full marks if the answer deserves

	it.
12	Every examiner has to necessarily do evaluation work for full working hours i.e., 8 hours every day and evaluate 20 answer books per day in main subjects and 25 answer books per day in other subjects (Details are given in Spot Guidelines). This is in view of the reduced syllabus and number of questions in question paper.
13	 Ensure that you do not make the following common types of errors committed by the Examiner in the past: - Leaving answer or part thereof unassessed in an answer book. Giving more marks for an answer than assigned to it. Wrong totaling of marks awarded on an answer. Wrong transfer of marks from the inside pages of the answer book to the title page. Wrong question wise totaling on the title page. Wrong totaling of marks of the two columns on the title page. Wrong grand total. Marks in words and figures not tallying/not same. Wrong transfer of marks from the answer book to online award list. Answers marked as correct, but marks not awarded. (Ensure that the right tick mark is correctly and clearly indicated. It should merely be a line. Same is with the X for incorrect answer.) Half or a part of answer marked correct and the rest as wrong, but no marks awarded.
14	While evaluating the answer books if the answer is found to be totally incorrect, it should be marked as cross (X) and awarded zero (0)Marks.
15	Any un assessed portion, non-carrying over of marks to the title page, or totaling error detected by the candidate shall damage the prestige of all the personnel engaged in the evaluation work as also of the Board. Hence, in order to uphold the prestige of all concerned, it is again reiterated that the instructions be followed meticulously and judiciously.
16	The Examiners should acquaint themselves with the guidelines given in the " Guidelines for spot Evaluation " before starting the actual evaluation.
17	Every Examiner shall also ensure that all the answers are evaluated, marks carried over to the title page, correctly totaled and written in figures and words.
18	The candidates are entitled to obtain photocopy of the Answer Book on request on payment of the prescribed processing fee. All Examiners/Additional Head Examiners/Head Examiners are once again reminded that they must ensure that evaluation is carried out strictly as per value points for each answer as given in the Marking Scheme.

	MARKING SCHEME: PHYSICS(042)				
	Code: 55/2/2				
Q.No.	VALUE POINTS/EXPECTED ANSWERS	Marks	Total Marks		
	SECTION A				
1.	(D) Zero	1	1		
2.	(A) 1.05	1	1		
3.	(C) $v\uparrow \longrightarrow t$ $0 \qquad T_{l_2}T$	1	1		
4.	(D) repelled by north pole as well as by south pole	1	1		
5.	(A) $\frac{n_1}{n_2}$	1	1		
6.	(C) $\frac{5.0}{\sqrt{2}} \times 10^{-10} \hat{k} T$	1	1		
7.	(C) 0.63 V	1	1		
8.	(C) Lyman series	1	1		
9.	(D) f	1	1		
10.	(A) conservative and field lines do not form closed loops.	1	1		
11.	(A) resistor / (C) capacitor	1	1		
12.	(D) 5	1	1		
13.	(C) If Assertion (A) is true but Reason (R) is false.	1	1		
14.	(B) If both Assertion (A) and Reason (R) are true but Reason (R) is not the correct explanation of Assertion (A).	1	1		
15.	(C) If Assertion (A) is true but Reason (R) is false.	1	1		
16.	(A) If both Assertion (A) and Reason (R) are true and Reason (R) is the correct explanation of Assertion (A).	1	1

$=\frac{\mu_0 I_a I_b}{L}$	1	
$2\pi d$		
Definition –		
The 'ampere' is that value of steady current which, when maintained in each of		
the two very long, straight, parallel conductors of negligible cross-section, and placed one metre apart in vacuum, would produce on each of these conductors	1	
a force equal to $2x10^{-7}$ newton per metre of length.		
(ii) Work done by the magnetic force on the charge is zero as force is	1	
perpendicular to \vec{v} .	-	
(iii) The velocity (\vec{v}) is at an arbitrary angle θ w.r.t the magnetic field (\vec{B}) .	1	
OR		
(b)		
(i) Explanation 1		
(i) Obtaining relation for \vec{M} , and direction of \vec{M} . 1+1		
(ii) Obtaining relation for M, and direction of M. (iii) Net force on coil		
Obtaining orientation ¹ / ₂		
Showing flux is maximum ¹ / ₂		
(i) The two faces of a current carrying loop behave like two poles of a magnet		
therefore can be considered as a magnetic dipole placed along its axis.	1	
(ii) Magnetic moment (M) α Current (I)		
α Area (A)	1	
\therefore $M = IA$	1	
Direction is same as the area vector.	-	
<u>Alternatively</u> : -		
Magnetic moment is perpendicular to the plane of the coil.		
	1	
(iii) Net force acting on the coil is zero.	1	
The potential energy (U_B) of a current carrying loop in an external magnetic field =- $\vec{M}.\vec{B}$		
	1/2	
For the coil to be in stable equilibrium U_B should be minimum so $\theta = 0^\circ$.		
Therefore, magnetic flux (ϕ) due to the total field = ($B_{coil} + B_{ext}$) A, which is	1⁄2	
its maximum value.		

<u>Alternatively</u>: -Orientation of stable equilibrium is one where the area vector A of the loop is in the direction of external magnetic field. In this orientation, the magnetic field produced by the loop is in the same direction as external field, both normal to the plane of the loop, thus giving rise to maximum flux of the total

field.

5

Marking Scheme Strictly Confidential (For Internal and Restricted use only) Senior School Certificate Examination, 2025 SUBJECT NAME PHYSICS (PAPER CODE 55/2/3)

General Instructions: -

1	You are aware that evaluation is the most important process in the actual and correct assessment of the candidates. A small mistake in evaluation may lead to serious problems which may affect the future of the candidates, education system and teaching profession. To avoid mistakes, it is requested that before starting evaluation, you must read and understand the spot evaluation guidelines carefully.
2	"Evaluation policy is a confidential policy as it is related to the confidentiality of the examinations conducted, Evaluation done and several other aspects. Its' leakage to public in any manner could lead to derailment of the examination system and affect the life and future of millions of candidates. Sharing this policy/document to anyone, publishing in any magazine and printing in News Paper/Website etc. may invite action under various rules of the Board and IPC."
3	Evaluation is to be done as per instructions provided in the Marking Scheme. It should not be done according to one's own interpretation or any other consideration. Marking Scheme should be strictly adhered to and religiously followed. However, while evaluating, answers which are based on latest information or knowledge and/or are innovative, they may be assessed for their correctness otherwise and due marks be awarded to them. In Class-X, while evaluating two competency-based questions, please try to understand given answer and even if reply is not from marking scheme but correct competency is enumerated by the candidate, due marks should be awarded.
4	The Marking scheme carries only suggested value points for the answers These are in the nature of Guidelines only and do not constitute the complete answer. The students can have their own expression and if the expression is correct, the due marks should be awarded accordingly.
5	The Head-Examiner must go through the first five answer books evaluated by each evaluator on the first day, to ensure that evaluation has been carried out as per the instructions given in the Marking Scheme. If there is any variation, the same should be zero after deliberation and discussion. The remaining answer books meant for evaluation shall be given only after ensuring that there is no significant variation in the marking of individual evaluators.
6	Evaluators will mark (√) wherever answer is correct. For wrong answer CROSS 'X" be marked. Evaluators will not put right (✓) while evaluating which gives an impression that answer is correct and no marks are awarded. This is most common mistake which evaluators are committing.
7	If a question has parts, please award marks on the right-hand side for each part. Marks awarded for different parts of the question should then be totaled up and written in the left- hand margin and encircled. This may be followed strictly.
8	If a question does not have any parts, marks must be awarded in the left-hand margin and encircled. This may also be followed strictly.
9	If a student has attempted an extra question, answer of the question deserving more marks should be retained and the other answer scored out with a note "Extra Question".
10	No marks to be deducted for the cumulative effect of an error. It should be penalized only once.
11	A full scale of marks 70 (example 0 to 80/70/60/50/40/30 marks as given in Question

	Paper) has to be used. Please do not hesitate to award full marks if the answer deserves
12	Every examiner has to necessarily do evaluation work for full working hours i.e., 8 hours every day and evaluate 20 answer books per day in main subjects and 25 answer books per day in other subjects (Details are given in Spot Guidelines). This is in view of the reduced syllabus and number of questions in question paper.
13	Ensure that you do not make the following common types of errors committed by the Examiner in the past: -
	 Leaving answer or part thereof unassessed in an answer book.
	Giving more marks for an answer than assigned to it.
	Wrong totaling of marks awarded on an answer.
	 Wrong transfer of marks from the inside pages of the answer book to the title page.
	 Wrong question wise totaling on the title page.
	 Wrong totaling of marks of the two columns on the title page.
	Wrong grand total.
	 Marks in words and figures not tallying/not same. Wrong transfer of marks from the answer back to online award list.
	 Wrong transfer of marks from the answer book to online award list. Answers marked as astront, but marks not swarded. (Ensure that the right tick mark
	• Answers marked as correct, but marks not awarded. (Ensure that the right tick mark is correctly and clearly indicated. It should merely be a line. Same is with the X for
	incorrect answer.)
	Half or a part of answer marked correct and the rest as wrong, but no marks awarded.
14	While evaluating the answer books if the answer is found to be totally incorrect, it should be marked as cross (X) and awarded zero (0)Marks.
15	Any un assessed portion, non-carrying over of marks to the title page, or totaling error detected by the candidate shall damage the prestige of all the personnel engaged in the evaluation work as also of the Board. Hence, in order to uphold the prestige of all concerned, it is again reiterated that the instructions be followed meticulously and judiciously.
16	The Examiners should acquaint themselves with the guidelines given in the "Guidelines
	for spot Evaluation" before starting the actual evaluation.
17	Every Examiner shall also ensure that all the answers are evaluated, marks carried over to
	the title page, correctly totaled and written in figures and words.
18	The candidates are entitled to obtain photocopy of the Answer Book on request on
	payment of the prescribed processing fee. All Examiners/Additional Head Examiners/Head
	Examiners are once again reminded that they must ensure that evaluation is carried out
	strictly as per value points for each answer as given in the Marking Scheme.

(i) Calculating final potential		
- on sphere A 1		
- on shell B 1		
(ii) Two characteristics of		
of equipotential surface $\frac{1}{2}+\frac{1}{2}$		
Finding potential at (4m,3m) 2		
(i) Potential on sphere A = V = $\frac{Q}{4\pi\epsilon_0 r}$		
0	1/2	
Charge on sphere $A = 4\pi\epsilon_0 r V$	/ _	
The charge is transferred to shell B.		
Potential on shell B = $\frac{1}{1} \times \frac{4\pi\varepsilon_0 rV}{rV}$		
Potential on shell B = $\frac{1}{4\pi\varepsilon_0} x \frac{4\pi\varepsilon_0 rV}{R}$	1⁄2	
Potential on shell $B = \frac{rV}{R}$		
Potential on sphere A = Potential on shell B	1	
(ii) Characteristics of equipotential surfaces: -		
(Any two)		
- Potential at all points on the surface is same.		
Equipotential surface is normal to the direction of the electric field.The work done in moving a charge on an equipotential surface is zero.	1/2+1/2	
$N = N - E d - 50 \pi d$	1/2	
$V_0 - V = E d = 50 x 4$ $V_0 - V = 200 V$	1⁄2	
$V_0 - V = 200 V$ V = 220 V - 200 V	1⁄2	
V = 220 V - 200 V V = 20 V	1⁄2

 (i) Open Surface – A surface which does not enclose a volume. Closed Surface – A surface which does enclose a volume. 	1/2	
S C C C C C C C C C C C C C C C C C C C	1	
(ii) Electric flux is defined as the number of electric field lines crossing an area normally.	1	
<u>Alternatively</u> -		
$\phi = \overrightarrow{\text{E.A}}$		
<u>Alternatively</u> -		
$\phi = \text{EAcos}\theta$		
Significance of Gaussian Surface: -		
It helps in finding the electric field in a simpler way.	1⁄2	
<u>Reason:</u> -		
Because any electric field line from the charge which enters the surface at one point will exit at another, resulting in a net zero flux.	1⁄2	
(iii) Total charge enclosed by $S_1 = (-3-2+9) \mu C = 4 \mu C$ Total charge enclosed by $S_2 = Q + 4 \mu C$	1⁄2	
$\frac{\phi_{s_2} = 4\phi_{s_1}}{\frac{Q + 4\mu C}{\epsilon_0}} = 4\left(\frac{4\mu C}{\epsilon_0}\right)$	1⁄2
